Data Collection Plan for BSE 4100
Supervisor: Dr Agaba Joab

BSE23-05

NAME	REGISTRATION NUMBER	STUDENT NUMBER
TEKO SAMUEL OGALA	19/U/8236/EVE	1900708236
ARWA LINDA	19/U/8850/EVE	1900708850
MBEIZA RACHEAL LORNA	19/U/8318/EVE	1900708318
NSUBUGA Y CONRAD JOHN J	19/U/8905/EVE	1900708905

1.	Group Number	BSE23-05
2.	Project Title	Smart Garbage Management System(SGMS)
3.	Objectives of data collection	• To find challenges faced during the garbage collection process • To identify ways in which existing technology can be used to solve these challenges • Understand the garbage collection process such that we find ways of making our system fit in.
4.	Organisation/ community to collect data from. Give reason why the organisation was selected	Kampala Capital City Authority - The organisation is in charge of collecting garbage with in kampala

		Private companies- we have selected Nabugabo Updeal Joint Venture because they assist KCCA in collection of garbage within the central region. Hostels - They produce a lot of garbage since handle a large number of residents College - They produce a lot of garbage since they handle a large traffic of people.
5.	Category of respondents to collect data from. Reasons why the categories were selected	KCCA Management - to understand how they are currently managing the garbage collection around Kampala. Garbage producers- to understand their garbage production patterns and how they handle their garbage. Garbage Collectors - to understand how they currently handle the garbage collection and what they are passing through while doing their work.
6.	Data collection methods to be used. Give reasons for your choices. See https://www.scribbr.com/methodology/data-collection/#step-2-choose-your-data-collection-method	• Survey - to enable us to reach a large number of respondents. • Interview - to clearly understand the process of garbage collection as seen by management KCCA. • Observation - to witness for ourselves first hand how the process flows
7.	Sample sizes of the respondents per type of method to use.	• survey: 25 • Interview: 5 • Observation: 5
8.	Data collection administration methods. Reason	• Interviews we need to physically meet with the officials responsible for garbage collection in the central region so they vividly give an account of how garbage is currently managed. • Surveys and questionnaires printing physical copies • Observations - walking to the field and looking at the current process.

9.	Will you do any pilot for your data collection tools? Which category of people will you use?	Yes, makerere university students.
10.	Will you need an introductory letter from the department?	Yes
11.	What kinds of data do you plan to collect and to what relevance will it be to the design of your system?	Primary data : to guide us on the challenges faced currently in the garbage management process which will help us know the most urgent system needs. Secondary data : to identify how the existing research has tried to address this problem and what was left unsolved.
12.	Do you plan to return with some records from the data collection process? If so, which ones?	Interview recording Observations Questionnaire responses
13.	How do you intend to analyse the data? Read this https://sixsigmastudyguide.com/types-of-data/	To categorise and compare the responses from the data collected to help us zero down to the most important system requirements.
14.	Artefacts to bring from the field (eg. Recordings (Ask for permission if you want to record), images, receipts, registration forms etc)	Images from the field. Interview recordings.
