

14th Oct 2024

To;
The Procurement Officer
Cooperative for Assistance and Relief Everywhere (CARE)

Re: Submission of Technical Proposal for MIS System Development and Implementation Services

Dear Sir/Madam,

We are writing to express our interest in providing the MIS System Development and Implementation Services software for the CARE (Cooperative for Assistance and Relief Everywhere). With extensive experience in software development and a strong commitment to enhancing organizational efficiency through digital solutions, our team is well-positioned to deliver a customized, user-friendly, and secure system that meets CARE's requirements. Having participated in a number of other related assignments such as;

- i. Development of the National digital observatory for persons with disability in Uganda
- ii. Development and upgrade of the Uganda Wildlife Authority Wildlife Offenders database funded by WCS-USAID
- iii. Development of the seed tracking and tracing system for the SAHEL Region (Mali & Niger)
- iv. Re-Development of RUFORUM information management system (RIMs)
- v. Design, developing, testing and deploying a web-based community dashboard to be utilized by grassroots community groups to identify, document and report SRHR and health rights violations in real time for CEHURD.
- vi. Development of the Clinic Master Management System.

We believe our experience and expertise align perfectly with CARE's needs, and we are confident in our ability to deliver a robust MIS solution.

We look forward to collaborating with CARE to achieve your goals of digital transformation.

Sincerely,

Dr. Drake Patrick Mirembe
CTO, Eight Tech Consults

DEFINITION AND CONTACT INFORMATION

The enclosed information is confidential to Eight Tech and is provided for development of the Management Information System (MIS). The Chief Technical Officer (CTO) of Eight Tech Consults Ltd. (8Tech) reserves the right to alter any of the information enclosed or subsequently connected information. The content MAY NOT, therefore, be shared in any way to anybody other than the relevant employees of the aforementioned organization.

1.0 INTRODUCTION

CARE USA is a leading humanitarian organization fighting global poverty and providing relief in disaster situations. CARE's Country Office in Somalia is committed to improving its data management and monitoring functions through the development of a comprehensive Management Information System (MIS). This system will serve as a central data repository for its diverse programs, enhancing the capacity for efficient program documentation, monitoring, and reporting, while addressing the organization's country-wide data management needs.

CARE has implemented various data collection and reporting processes across multiple programs and partnerships. However, the current manual and fragmented systems have limited CARE's ability to streamline data operations effectively. To address these challenges, CARE is seeking external service providers to design, develop, and implement an MIS that enhances data management operations across its country programs and partner network.

Through this initiative, CARE aims to achieve the following objectives:

Improved decision-making based on the accurate and timely submission of performance data by CARE's programs.

Streamlined data collection and reporting, leading to enhanced efficiency, program scalability, and overall productivity.

Improved compliance with data management processes by staff and partners, leading to better program outcomes.

1.2 Problem Statement

CARE Somalia is currently running multiple programs across the country, collaborating with several partners and stakeholders. The current data management system leverages a mixture of manual processes and off-the-shelf tools (such as Microsoft Forms, Salesforce, and Power BI) to document and manage program data. While these tools have been beneficial for managing specific aspects of program data, the system has become increasingly fragmented, resulting in inefficiencies and data silos.

With the scale and complexity of CARE's operations growing, the current approach is no longer sustainable. The reliance on disparate systems has introduced several challenges, including:

Fragmentation of Data: The use of multiple platforms creates significant data silos, making it difficult to compile, analyze, and generate insights across programs.

Manual Data Migration: Staff members spend a considerable amount of time migrating data between systems, which compromises data integrity and efficiency.

Difficulties in Onboarding New Partners: Introducing new partners and stakeholders to multiple tools has become a complex and time-consuming process.

Reduced Data Accuracy: The fragmentation of tools complicates the development of accurate reports and performance insights.

2.0 OUR UNDERSTANDING OF THE ASSIGNMENT

We understand that CARE Somalia seeks to develop, implement, and support a comprehensive Management Information System (MIS) that will serve as a centralized data management platform for its Country Office-wide needs. This system is intended to streamline data collection, storage, management, user access, and reporting functions, ensuring more efficient monitoring, evaluation, and learning (MEAL) processes and improved knowledge management across all programs.

Additionally, we understand that CARE's current data management system consists of a mix of off-the-shelf tools that create a fragmented experience for staff and partners. These tools do not sufficiently support the scaling needs of CARE's expanding programs, making it increasingly difficult to manage and analyze data efficiently across multiple platforms. By integrating this new MIS, CARE aims to enhance the accuracy, integrity, and timeliness of its program data, enabling better decision-making, program monitoring, and reporting outcomes.

2.1 Overall Purpose

The overall purpose of this assignment is to design and implement an integrated MIS system that consolidates CARE Somalia's data management processes into a single, user-friendly platform. This system will support CARE's program management, improve data accuracy and reporting capabilities, and ensure that data is readily accessible by staff, partners, and field teams, both online and offline.

The MIS will be tailored to the unique needs of CARE Somalia, ensuring seamless data collection, monitoring, and reporting across all its programs. The system will also enhance collaboration among key stakeholders, including program managers, field teams, partners, and CARE staff.

2.2 Key Objectives

Centralized Data Repository: Create a centralized platform for data storage and management, accessible to all CARE programs and relevant partners.

User Access and Security: Ensure robust access control mechanisms, including user-specific login credentials and role-based access, to maintain data security and integrity.

Seamless Offline and Online Data Management: Support data collection and synchronization in both offline and online environments, particularly for remote field teams working in challenging environments.

Customizable Reporting and Dashboards: Enable comprehensive reporting and dynamic dashboards that provide real-time insights into program performance at various organizational levels.

Integration with Existing Tools: Ensure the MIS is interoperable with CARE's existing data management systems (e.g., Salesforce, Microsoft Power BI) and can easily scale with future needs.

2.3 Scope of Work

Below is our interpretation of the scope of work for the assignment.

Scope of Work	Interpretation
User Research: Conduct thorough research to understand the needs of key stakeholders, including program staff, field teams, and partners, to ensure that the system is designed to meet their needs.	We will conduct in-depth user research to understand the unique needs and challenges of all users. This will inform the design of an intuitive and efficient MIS system.
Design Wireframes and Prototypes: Develop mobile-friendly wireframes and prototypes of the MIS to visualize user journeys before full development.	We will design wireframes and prototypes that represent user flows for different personas, ensuring mobile compatibility for offline functionality.
Build a Design System: Develop a cohesive design system that defines visual components, styles, and libraries to ensure consistency in the system's look and feel.	We will create a comprehensive design system to ensure scalability, consistency, and usability of the system across all interfaces.
Content Organization: Ensure the system's content is organized in a way that is intuitive and accessible to all users, promoting ease of use and data management.	We will structure the system's content to ensure it is user-friendly and organized in a manner that enhances usability across various stakeholder groups.
Collaborate with Development Team: Work closely with the development team to implement prototypes, provide product specifications, and ensure designs meet user needs.	We will collaborate with the development team to ensure the accurate implementation of prototypes and provide ongoing feedback throughout the development cycle.
Usability Testing: Conduct user testing of the developed prototypes and designs to gather feedback	We will facilitate usability testing, incorporating

and improve the system's usability and user experience.	feedback into the design process to refine the overall user experience.
Accessibility Compliance: Ensure the system adheres to Web Content Accessibility Guidelines (WCAG) to accommodate users with disabilities.	We will ensure that the system meets accessibility standards, ensuring inclusive use for all users, including those with disabilities.

2.4 Our Comments and Assumptions on the Terms of Reference

We appreciate the clarity of the Terms of Reference and would like to highlight the following comments and assumptions:

1. User Research: We assume that CARE will provide access to key stakeholders, including program managers, field teams, and relevant partners, to support the user research phase.
2. Timeline: The timeline for development and implementation has been set at 6 months. We suggest that an additional 8 weeks be allocated for comprehensive testing and knowledge transfer to CARE staff to ensure a smooth handover and system optimization.
3. Integration with Existing Systems: The TOR mentions integration with existing systems such as Salesforce and Power BI. We assume that detailed technical documentation for these integrations will be provided to ensure smooth connectivity with the new MIS.
4. User Training: We assume that CARE will identify key staff members for MIS training and system administration, enabling them to manage the system post-implementation.
5. Security Measures: The system requires robust security features, including role-based access and data encryption. We assume that specific security protocols and compliance requirements will be agreed upon during the design phase.
6. Payment Structure: We propose a payment plan in three phases—40% upon project initiation, 30% upon delivery of key milestones (such as design approval and user testing), and 30% upon final delivery and handover of the system.
7. Regular Feedback and Iterations: We assume that there will be regular feedback cycles with the CARE project team to ensure that the system aligns with organizational needs throughout the development process.

3.0 BRIEF PROFILE OF THE CONSULTANT

Eight Tech Consults Ltd (Eight Tech) is a consultancy firm that prides itself as one of the fastest growing ICT and Management Consultancy firms in the region. The company is composed of a talented and dedicated team of professionals with a drive for excellence, learning and vision. Our core competencies are in the fields of; Web technologies, Business process engineering, systems and software Engineering, Multimedia content, Cyber Security, General ICT Consultancy Services, Capacity building and E-learning systems development, content creation, Basic and Applied Research formulation and management, Innovation and business Incubation Services, Financial Management, leadership and human capital development, Project management, Training services, Monitoring & Evaluations, data science, E-Business Service, Mobile and Management Consultancy Services among others

Eight Tech Consults was founded on very strict core values of believing in freedom of respect and the value of the mind. We see our employees and clients as a foundation of our company. We believe in value creation and a shared sense of purpose with clients, yet keeping things simple. We're imaginative but never irrelevant, confident but never cocky, down to earth but never dull in innovating for the future. We stand by a high sense of integrity, honesty, and truthfulness with our Vision "Innovating for the future generation" Mission "To contribute towards social and economic development: through the development and deployment of innovative technologies and services."

Presently, the company has a battalion of professionals with diverse skills and experience in the services we offer. We boast of our experienced team which includes professors, Ph.D. holders, and very technical people in various fields of our operations like ICT and management, finance, business management, water and sanitation, educational services, human resource, and talent management among others. Our team boasts of over 100 years of combined experience in our areas of operation.

Company name	Eight tech consults limited
Head office physical address	Magdalene Lane Opposite Ntinda Kisaasi Road Opp Ndere Centre P. O BOX 36859
Names of company directors	• Prof Jude Lubega (CEO) • Dr. Drake Patrick Mirembe (CTO) • CPA Baker Ssekito (COO)

other contact details	info@8technologies.net +256-393256165 /+256 778167775
Company status	Eight Tech Consults is a leading consulting firm specializing in digital transformation and business development services.
Number of employees	25
Volume of business	Eight Tech Consults has consistently demonstrated robust growth and significant market presence in the ICT consultancy sector. Over the past Sixteen years, our firm has achieved significant average annual revenue as reflected in our annual reports (attached) reflecting our strong financial performance and client trust. Our portfolio boasts over 20+ successfully completed projects annually, ranging from ICT management and software development to research, data science, and edu-tech solutions. Our clientele spans various sectors, including government ministries, educational institutions, and private enterprises, ensuring a diverse and resilient business foundation. Our team of 25 full time staff and other on-call dedicated professionals brings a wealth of expertise and innovation to every project. We are proud to serve clients across the globe, demonstrating our extensive geographic reach and ability to meet diverse needs. Noteworthy projects include; We have successfully completed numerous projects across various sectors, leveraging our expertise in software development assignments with the most recent software assignment being adapting the digital seed tracking-tracking system (stts) for the sahelian seed sector. Currently developing and accountability system for LDF and supporting about 5 systems which includes national digital observatory for PWDs, the ICT4Farmers system, and an In house Task Ease information management system. These initiatives underscore our commitment to leveraging ICT for sustainable development and social inclusion.
At least 3 references from institutions where the firm has developed a similar software	Attached below

Certifications	Attached in the annexes.
Name of auditing firm	Ssekito Kaimanda and CO. Associates

We are a full-service creative firm working both national and international with a range of clients. We started out in 2007, with the idea of developing appropriate technologies and services for sustainable development hence our slogan. “Transforming societies through innovative technologies and services”. Since 2007, we’ve stayed proudly independent, which means we decide how we grow and where we go. We believe in keeping things simple. We do not just provide services, but rather solutions to client’s business needs

Eight Tech Consults Ltd (Eight Tech) stands out as a management consultancy firm, known. Below are some of the national and international clients we have worked with over the years;

International Organisations

National Organisations

4.0 PROJECT APPROACH AND METHODOLOGY

This section outlines our approach and methodology for delivering the Management Information System (MIS) for CARE Somalia. Our methodology is based on best practices, ensuring that the system meets CARE's unique needs while being adaptable to future changes and scalability requirements.

4.1 Proposed Solution

Our proposed MIS system will be designed from the ground up to align with CARE's operational needs, with a focus on modularity, scalability, and integration with existing systems that you might be currently using. We will utilize a user-centered design approach, ensuring that the interface is intuitive and easy to navigate for users at all technical proficiency levels.

The key features of our system will include:

1. **Integration Capabilities:** Seamless integration with existing platforms, ensuring interoperability with current data systems.
2. **Offline Functionality:** A robust mobile application supporting offline data collection on Android devices, with automatic synchronization once an internet connection is available.
3. **Customizable Form Creation:** Easy-to-use drag-and-drop tools for creating forms with repeat sections, skip logic, and real-time validation, ensuring data quality.
4. **Multilingual Support:** Ensuring accessibility for users speaking various languages.
5. **Advanced Reporting:** Powerful reporting tools will generate comprehensive reports and dynamic dashboards for informed decision-making.
6. **Data Security:** We prioritize data security. The system will employ industry-standard encryption protocols and access control mechanisms.

4.2 Data Security and Compliance

We will ensure the system adheres to the highest standards of data security, including encryption, user-specific login credentials, and secure transmission of sensitive information. The system will incorporate a detailed audit trail and support two-factor authentication to enhance security.

4.3 Training and Capacity Building

We will provide comprehensive training sessions to CARE staff, ensuring they are proficient in the use and management of the MIS. Training materials, manuals, and videos will be created to support ongoing learning and user support.

4.4 Technical approach

We will employ an Agile development methodology to ensure flexibility and responsiveness to changing requirements. This approach will allow us to deliver the system in modules, ensuring timely feedback and adjustments during development.

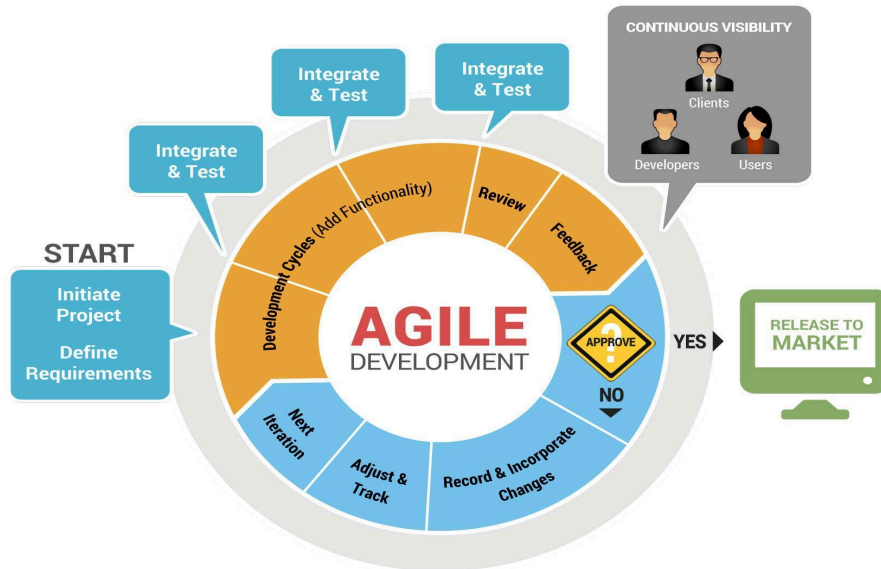

Figure 1: Agile Development Methodology

Our approach to the development of CARE's Management Information System (MIS) is grounded in a clear, structured, and detailed methodology designed to deliver a comprehensive, scalable, and user-friendly solution that aligns with CARE's operational needs. This technical approach ensures that each phase of development is methodically executed, focusing on efficiency, data security, and usability. Below, we outline the specific steps in the development lifecycle. Eight Tech Consults Ltd proposes to execute this assignment in four major phases, as outlined below;

Phase	Activity/Step	Description of what is involved	Deliverable
Phase 1: Inception Phase	Entry meeting	Upon contract signing, an entry meeting with CARE will be held to align expectations and confirm the project scope and objectives.	Meeting minutes
	Preliminary review of documents	Background documentation will be reviewed to provide the necessary context for the project.	Summary of findings Research findings report
	Stakeholder and user research	Interviews and surveys will be conducted with key users and stakeholders to gather functional and design requirements.	
	Inception report	A report summarizing the findings, a refined methodology, and a detailed project plan will	Inception report

		be presented to the client.	
	Inception meeting	The inception report will be presented for review and approval by the client.	Updated inception report
Phase II: Implementation Phase	Design thinking workshop	Workshops will be held with key stakeholders to conceptualize the system and its functional requirements.	Design concept and system requirements specification (SRS) document
	Design of the system architecture	A prototype will be developed based on initial requirements, including wireframes and mockups. This will provide an early visualization of the system.	System prototype
	Design and Implementation	The development team will upgrade necessary frameworks and begin coding the core components of the system, ensuring integration with any required systems.	Working modules
	Testing and refinement	Quality assurance (QA) testing will be performed to identify and resolve any bugs. Refinements will be made based on testing feedback.	Quality Assurance reports
	Development of user manuals	User manuals for both administrators and end-users will be developed to ensure easy system navigation and usability.	User manuals
Phase III: Deployment Phase	Deployment and rollout	The system will be deployed to CARE's servers or designated cloud infrastructure, ensuring full system functionality and resolving any technical issues.	Fully deployed and tested system
	Technical support	Post-deployment, technical support will be provided for a period of 6 months to ensure the system runs smoothly.	Ongoing technical support
	Training of administrators	End-user training sessions will be held to ensure that all users can effectively navigate	Training report

	and users	the system, engage with content, and complete tasks.	
Phase IV: Reporting	Progress reporting	Monthly reports will be provided to update CARE on the project's progress, any challenges encountered, and completed milestones.	Monthly progress reports
	End of Project Report	Upon completion, a final project report will be submitted, documenting the entire development process, user feedback, and final system functionalities.	End of Project report
	Exit meeting	A final meeting will be held to close out the project and document lessons learned for future improvements.	Meeting minutes
	Support	We offer a free support period of 6 months after deployment, after which a fee will be charged	Ongoing

5.0 WORK PLAN AND TIMELINE

We suggest for the duration of execution of the assignment to be 7 months (30 weeks) to allow enough time for optimal results as shown below;

Phase	Activity	Period (Months)						
Inception Phase		1	2	3	4	5	6	7
	Entry meeting							
	Preliminary review of documents							
	Stakeholder and user research							
	Inception report							
	Inception meeting							
Phase II: Implementation Phase	Design thinking workshop							
	Design of the system							

5.1 Risk Management:

1. **Data Migration Risks:** A detailed data migration plan to ensure seamless transfer of existing data without loss or disruption.
2. **System Downtime:** Implementation of fallback solutions and offline functionality to ensure continuity of operations.
3. **User Adoption:** Comprehensive training and support, with user-friendly tools to ensure high adoption rates and ease of use.

We offer a competitive, transparent pricing for the full lifecycle of the project as seen below;

15

2	Hosting of the management information system platform and offering of 24 hr support	4	yearly	150.53usd	602.12 usd
		Total contract price (excl VAT)			58,602.12usd
	VAT percentage (if applicable):				

A detailed cost breakdown sheet detailing the lump sum price stated in the financial offer form

	COST CENTERS	ESTIMATED EFFORT(%)	COST (USD)
A	Phase I: Inception Phase		
	Entry meeting, preliminary review of documents, review of existing system, inception report and inception meeting	10%	\$ 5800
B	Phase II: Implementation Phase		
	Design thinking workshop, design of the system architecture, design and implementation, testing and refinement, Development of user manuals	70%	\$40,600
C	Phase III: Deployment Phase		
	Deployment and rollout, technical support, training of administrators and end users	20%	\$11,600
	Hosting		\$602.12 for 4 years

	TOTAL		\$58,602.12
--	--------------	--	--------------------

Ongoing support after a period of 6 months is 1400 USD per year.

7.0 PROPOSED TEAM COMPOSITION

Name of the expert	Proposed position	Educational background – formal qualification	Years of experience	Specialist areas of knowledge
Dr. Drake Patrick Mirembe	Team Lead	PhD, Information Systems Security, B.Sc. Math and Computer Science	15 years	Dr. Drake is a software systems specialist with over 15 years' experience, a celebrated professional and academic in Africa and globally in the area of ICT pedagogy. He holds a PhD in Information Systems Security and a Master's degree Computer Systems Security from Radboud University, the Netherlands and B.Sc. Math and Computer Science from Makerere University.
Mr. Muhindo Mubarak	Lead Developer	Masters in Computer Science, Makerere University	8 years	Mubarak is a seasoned lead developer/System Admin with vast experience in managing development teams and delivering high-quality portfolio management systems.
Mr. Mbabazi Isaac	Lead trainer and Quality Assurance Expert	M.Sc. Computer Information Security	7years	Isaac is a content authoring specialist with extensive experience in designing system workflows and training materials. He is QA specialist and Systems Analyst/Trainer with experience in software system analysis and design.

				Isaac holds a Bachelor's degree in Software Engineering from Makerere University and a Master's degree in Computing, majoring in Information Security from Uganda Technology and Management University.
Fiona Nambogo	Business Analyst	Master's in Business Administration	6 years	Fiona is a highly motivated individual with a strong background in both technology and business. With a Bachelor's degree in Information Technology and currently pursuing an MBA, Fiona possesses a unique blend of technical and business acumen with a passion for using technology to solve complex business problems and streamline processes. She has successfully managed a number of projects with several organizations like World Bank, NITA_U, UCC, RUFORUM, UNESCO, EAAACA, MAARCI, Eskom Uganda Ltd, UNFFE, Civil Service College, Makerere College of Computing & Information Services, Makerere University, Bishop Stuart University, SENAI Bioscience Laboratories, to mention but a few.
Nuwagaba Collins	UI/UX Consultant And Developer	Master of Science in Computing: Computer Security	5 years	He is a multi-skilled Computer Engineer with a vast array of skills in the IT domain ranging from multimedia design, computer security, web design, embedded systems design,

				data science (Machine Learning), public relations and digital marketing.
Amokol Priscilla	Developer	Degree in Software Engineering, Makerere University	3 years	Priscilla is experienced in software development and UI/UX design, contributing to front-end and back-end system functionality.
Betty Namagembe	Researcher	Postgraduate Diploma in Monitoring and Evaluation	4 years	Ms. Betty Namagembe is an accomplished Senior Consultant in Research and Business Development with a robust background in statistics and extensive experience in stakeholder engagement and research. Betty has led numerous high-impact projects, with organizations such as UNESCO-IIEP, ENABEL, ATU, CSTS, UNITE, NUDIPU, UCC among others. She is known for her accuracy, analytical thinking, creativity, and excellent communication, both oral and written. With a proven track record in training facilitation, mentoring, and capacity development, she has significantly contributed to the growth and success of the organization.

7.1 SUMMARY OF SOME KEY ASSIGNMENTS OF THE FIRM AND ITS CONSULTANTS:

Assignment Title	Client's Name	Period	Contact person
------------------	---------------	--------	----------------

Enhancing ICT Adoption and service delivery content and digital skills for small holder farmers	UCC	March 2024 to	iberonda@ucc.co.ug James Beronda - UCUSAF Director
Testing, evaluation, and pilot validation of MAHABA digital platform	ELANCO	2023	jennifer.thomas@elancoah.com Jennifer Thomas -Program Manager ELANCO
Adapting the digital seed tracking-tracking system (stts) for the sahelian seed sector	STTS -SAHEL	2023	geoffrey.otim@issduganda.org Geoffrey Otim Programs Manager
Digitisation of the provision of services, farmer management and shop inventory management by implementing a system	LDF	2023	tkpf2011@yahoo.com Twine Ben -Chairman LDF
Development of a national digital observatory for enhancing ICT adoption, digital skills and access to e-services for persons with disabilities	UCC	2022-2023	iberonda@ucc.co.ug James Beronda - UCUSAF Director
National consultancy for needs assessment for NEA's Labour Migration Management Information System	ILO	2022	ouma@ilo.org Ouma Whycliff - ICT Manager
To conduct for the establishment of an online (web based) community dashboard with a cehurd customised mobile app	CEHURD	June 2022-October 2022	atwiine@cehurd.org Atwine Gracias - Deputy ED
Upgrade of the UWA OWODAT system	WCS	2022-2023	roluka@wcs.org Richard Oluka - M&E officer
The National seed tracking and tracing system for ministry of Agriculture, Animal, Industry and Fisheries	MAAIF	2022	erongue@yahoo.com Erongu Moses Edward
Supply, Installation and Commissioning of provision of an	ESKOM	May 2021-August 2021	Thozama Gangi MD – ESKOM UGANDA

e-learning Management System for Eskom Uganda Ltd			Thozama.Gangi@eskom.co.ug
Re-Development of RUFORUM information management system (RIMs)	RUFORUM	Dec 2019 to August 2020	Francis Otto f.otto@ruforum.org
Development of a digital seed tracking and tracing System	Integrated seed sector development (ISSD)	April 2020 to Sept 2020	Geoffrey Otim Policy manager spm@issduganda.org
Design, development, hosting and maintenance of a dynamic website' for IFF Project that is capable of managing communications and documents internally	GIZ-IGG	2017-2018
